

SOUTH AUSTRALIA.

AGRICULTURAL

AND

LIVE STOCK STATISTICS

FOR THE YEAR ENDING

MARCH 31ST, 1866;

WITH

PREFATORY REPORT.

PRESENTED TO BOTH HOUSES OF PARLIAMENT BY HIS EXCELLENCY'S COMMAND.

ADELAIDE:
BY AUTHORITY, W. C. COX, GOVERNMENT PRINTER, VICTORIA-SQUARE.

1866.

REPORT

TO THE HONORABLE ARTHUR BLYTH, M.P.,

CHIEF SECRETARY,

&c., &c., &c.

Chief Secretary's Office, Adelaide, 19th May, 1866.

Sir—

I have the honor to present to you, for the information of His Excellency the Governor-in-Chief, my Seventh Annual Report on the Agricultural and Live Stock Statistics, collected at the termination of the year ended 31st March last, Season 1865-6.

With a view to save needless trouble to the public, as well as to economy, the collection of these statistics was performed simultaneously with the enumeration of the Census, which had been fixed for the 26th March, six weeks later than the duty was undertaken last year. I was enabled, however, notwithstanding delays occasioned by the illness of several collectors, to present to you the usual approximate return of the wheat crop for publication on the 26th ultimo, only four weeks later than it was submitted last year. This explanation is due, as the statistics of a neighboring Colony were earlier made public, owing to the course adopted here in 1865 in collecting the information during February having been followed—a course which experience proved to be practicable, and one which will be recurred to on future occasions.

As in the performance of their duties as Census Enumerators, the Collectors were required to visit every house twice, the present returns may be viewed as more exact than is procurable on ordinary occasions, when one visit to each farm, or holding, only is necessary, and partly accounts for the increase in the aggregate extent of the several areas visible in the following tables. Many additional Collectors were employed, and great exertions were made to procure the assistance of the public in supplying full and reliable information; and I may bring to your notice, that much zeal has been shown by the general body of Collectors in the performance of their duties, in the face of hardships and difficulties arising from the unusual dryness of the season, and the scarcity of feed for their horses, especially in the districts to the north of Adelaide.

During the year 1865 no less than 316,476 acres of country and suburban land were alienated from the Crown—or 91,305 acres more than were disposed of during the preceding twelvemonths—making the total area of purchased land in occupation on the 31st December last, to be 3,210,290 acres, or 20·5 acres for each individual of the estimated population at that date, as compared with 2,893,814 acres on the 1st January preceding, when the average was 19·64 acres, or 0·64 acres more than at the commencement of 1864. As, however, the Census has shown the actual number of the people to be greater than the yearly estimated population returns exhibited, it is desirable to bring down the totals to the close of the first quarter of the present year, when it appears that the total quantity of purchased land amounted to 3,278,063 acres, or twenty acres per head of the ascertained population at that date.

At the close of 1861, in which year the preceding Census was taken, the total area of Crown lands alienated amounted to 2,379,048 acres, or eighteen acres per head of the then population; during the interval, therefore, 899,015 acres have passed into private hands; the average for each individual increasing from eighteen acres to twenty acres. Ten years ago the average quantity was fifteen acres per head.

It may be well to state that in all comparisons in this report where population is referred to, the divisor used as regards the present year, will be the number shown by the Census, and for previous years, unless otherwise stated, the estimated number at the close of the year spoken of.

The

The area of the counties proclaimed up to the present time, is 18,576,000 acres, of which about one-sixth part has been sold. Nearly two-thirds of the purchased land are in the occupation of freeholders, viz., 1,970,589 acres, as compared with 1,879,051 acres held under the same tenure last year, showing an increase of 91,538 acres.

The enclosure of land progresses favorably, the total extent now being 3,854,315 acres, an addition of 355,217 acres during the year. Deducting the area of land under cultivation from the above quantity, the extent of fenced pasturage will be found to amount to 3,193,746 acres, being in excess of the quantity returned last season, by 282,423 acres. The principal increase appears in the South-eastern District, in which 2,029,735 acres are now enclosed, all but 23,262 acres being devoted to pastoral purposes. At the time of taking these returns 1,316,768 sheep were depasturing in that district, or one-third of the total number in the Province. Supposing all the purchased land to be enclosed, it would still appear that four-fifths of the fenced land in that district is held under leases from the Crown.

Seventy-two thousand, seven hundred, and ninety-four acres additional land were brought under cultivation during the past season, an increase more than twice as great as that of the preceding one. In the three counties of Gawler, Light, and Stanley alone, the additional quantity of tilled land was 55,896 acres, and an increase of one-fourth is shown in county Grey, which has now 21,420 acres under the plough. The total area under cultivation is 660,569 acres, as compared with 587,775 acres in 1864-5—shewing an augmentation amounting to twelve and one-half per cent., whilst the increase during the previous year was only five and three-quarters per cent. In my last report, I stated that twenty per cent., or one in every five acres of purchased land was under cultivation, as was the case in 1863, and that notwithstanding the large purchases of land for grazing purposes, the ratio of cultivated to untilled land continued as 1 to 4; I am now enabled to show that unprecedented as were the land sales of 1865—316,476 acres having been disposed of by the Crown—the above proportions have not only been maintained, but have become slightly more favorable. Four acres of tilled land continue to be the rate per head for each individual of the population—or twelve acres for every male of fourteen years of age, and upwards.

With the exception of barley, oats, and potatoes, there is an increase in the area of land under each description of crop, the principal additions being in the breadth of hay, wheat, and fallow land. The high rates ruling for fodder, combined with the prospect of a poor yield of wheat, induced the cutting of a large extent for hay, which had originally been sown for a grain crop; the large increase of 35,426 acres therefore, appears in the breadth under hay, whilst the additional land under wheat is reduced to 19,772 acres.

The total area under wheat was 410,608 acres, against 390,836 acres last season, an increase of five per cent. only, or one per cent less than in 1864-5. In the latter year, two-thirds of the total land in cultivation were under wheat; this season the proportion is slightly under that, being only sixty-two per cent. Two and a-half acres of wheat are grown to each person in the community. The aggregate produce of the harvest amounted to 3,587,800 bushels, or 665,149 bushels below that of 1864-5; the average yield per acre being, so far as I am aware, less than in any preceding season, only amounting to 8 bushels 44lbs. per acre. During the previous seven years the lowest yield recorded was 9 bushels 38lbs. (in 1859-60), whilst the average for the whole period was twelve bushels, or 3 bushels 16lbs. above that of 1865-6. The following table gives the total area of land under cultivation, the acreage under wheat, the gross produce of the harvest, and the average yield per acre for each of the past eight seasons.

Season.	Acres cultivated.	Acres under Wheat.	Produce, Wheat.	Average per Acre.
			Bushels.	B. lbs.
1858-9	264,462	188,703	2,109,544	11 11
1859-60	361,884	218,216	2,103,411	9 38
1860-61	428,816	273,672	3,576,593	13 4
1861-2	486,667	310,636	3,410,756	10 59
1862-3	494,511	320,160	3,841,824	12 0
1863-4	555,968	335,758	4,691,919	14 0
1864-5	587,775	390,836	4,252,949	11 0
1865-6	660,569	410,608	3,587,800	8 44

Except as a matter of record, it were needless to mention to what circumstance the almost

almost total failure of the harvest in some districts is to be ascribed. In fact, the main cause was so universally felt, that the minor complaints usually heard, such as of rust, hot winds, and other evils to which the crop is subject, were scarcely noticed in the Collectors' reports. The long drought of the previous summer, succeeded by a short and almost rainless winter, for only 12·581 inches fell during the five months, was but the precursor of a hotter and drier season, under which vegetation of every description suffered severely. The immense wheat field to the north of Gawler, averaging in ordinary seasons from fifteen to seventeen bushels to the acre, only yielded from five to eight.

From causes before-mentioned the extent of land upon which hay was cut was increased from 66,570 acres to 101,996 acres—more than one-half; but, as the crop only yielded seventeen hundredweight to the acre, or nearly one-fourth less than in 1864-5, the gross produce only resulted in an additional yield of 12,075 tons, being 88,731 tons, in place of 76,656 tons. In 1863-4 the yield per acre was twenty-seven hundredweight, and the total quantity secured 102,293 tons, off 75,590 acres—a fair average crop. It will thus be seen how serious a deficiency has existed, during the two past years, in the supply of this article of fodder.

Fewer acres of barley and oats were sown, and the yield was poorer than in the previous unfavorable season. Of barley 9,362 acres were reaped, as against 12,585 acres, a decrease of 3,223 acres, whilst the gross produce was only 130,679 bushels, as compared with 207,022 bushels; the average yield per acre being 13 bushels 48 lbs., or 2 bushels 24lbs. less than that of 1864-5. A decrease of 2,221 acres appears in the quantity of oats, only 2,872 acres having been sown; and the yield only amounted to 42,642 bushels, a deficiency of 32,493 bushels; the average being but 14 bushels 34 lbs. to the acre.

Many additional acres are returned under the head of green forage, the principal increase being in the growth of lucerne and artificial grasses; of the latter, 2,962 acres are returned as under successful cultivation in County Grey. The total area laid down for green forage was 7,576 acres, as against 2,639 acres last year; the returns for the past season giving 2,514 acres of wheat, barley, and oats, 230 acres of sorghum, &c., 1,424 acres of lucerne, and 3,408 acres of grasses; showing the following increases—1,702, 100, 568, and 2,567 acres respectively.

Peas are now cultivated to some extent, and appear in the returns—for the first time—as covering 969 acres; other minor crops, not specified, show an aggregate of 1,272 acres or 999 acres more than last season; they include, among others, rye, turnips, mangold wurzel, maize, cotton, tobacco, and hops.

Fallow land appears as 110,037 acres, or 15,260 acres additional, being nearly the same extent as was returned the year before last. The principal items under this head appear in the Counties of Light, Adelaide, and Gawler; and much new land was prepared for seed in Counties Stanley and Sturt. For every four acres of wheat there was one acre of land in fallow.

The potato crop again proved a failure, only 4,823 tons being taken from 2,775 acres planted, or but thirty-five hundredweight to the acre. As compared with the preceding crop, itself a poor one, there will be found a decrease of 188 acres in extent, 1,670 tons of produce, and a reduction of nine hundredweight in the average yield. One-fourth of the whole crop was grown in County Grey, where the yield is returned as two tons per acre. It would appear from the small amount of produce returned in some of the Northern Districts, that the crop in that locality was not worth taking out of the ground.

Orchards and gardens cover 6,473 acres, or 798 acres more than were returned last year—partly attributable to the greater exactness with which the returns on this occasion have been obtained. The above is exclusive of the acreage planted with vines, which, as far as practicable, is returned separately.

The vineyards now extend over 6,629 acres, as will be noticed, a greater area than the orchards and gardens together. The increase during the year was 265 acres. The gross number of vines planted is 7,361,863, of which 5,255,889 are in bearing, and 2,105,974 are at present unproductive; 659,880 vines were added this season to the former class, but, as the diminution in the latter is greater by 66,000 than that number, explanation became necessary, when, upon inquiry, it was elicited that, although the area of the vineyards in some districts had been slightly augmented this season, in others the cuttings planted last year had almost entirely failed.

With respect to the produce of the vineyards, it must be understood that the quantity of wine made is the result of the preceding season's crop as the returns are taken before the vintage of the current season can be ascertained with correctness, or estimated

with

with a near approach thereto. The total quantity returned was 839,979 gallons, as against 798,647 gallons, or 41,332 gallons additional. In but one district, County Light, was there a falling off in the production, in all the others there will be found a slight increase on that of the preceding vintage, but hardly commensurate with the increased number of plants in bearing. 31,707 cwts. of grapes were returned as sold or disposed of otherwise than in wine making, or 1,080 cwt. more than last year—the greater portion being the produce of the vineyards in the vicinity of Adelaide.

Compared with the last returns, there is an additional number of horses—73,993, as against 62,899, or an increase of 11,094; partly accounted for by the live stock in towns being returned on the Census papers, this year, a remark applying also to the following items, viz., goats, which have increased from 9,474 to 12,283; pigs, from 53,430 to 55,742; and poultry, from 327,881 to 377,001—a not inconsiderable or unimportant augmentation.

The live stock statistics however exhibit but too clearly the losses the pastoral interest, and the country have sustained, through the long continuance of drought. This is the first occasion in which a diminution in the number of sheep depastured has been recorded; and although the number of cattle has been lessening year, by year, the falling off during the past season was unprecedented. Nine years ago we depastured twice the number of cattle that we now do—310,460 head as against 158,057—then we counted *three* head of cattle for each individual of the population, now but *one*. During the past year their number has been reduced from 204,892 to 158,057, or by 46,835 head. Within the County boundaries, there is a decrease of 10,978, whilst in the Pastoral Districts they have diminished from 62,527 to 26,670, or by 35,857 head. A portion of this loss may have extended over two years, as last season it was impracticable to collect the returns in two of the northern districts.

The aggregate number of sheep returned is 3,779,308, as against 4,106,230, or a decrease of 326,922, or nearly nine per cent. less, as compared with an increase last year of five and a-half per cent.; the increase in 1864 having been thirteen and a-half per cent. Comparing the returns for the year 1864, which were complete, with those for the past season, we find in the Northern District (viz., the country north of Port Augusta) that where in the former year, 455,085 sheep were depastured, there are now only 133,199; or 324,886 less. The whole number at present within the Pastoral Districts is 970,812, as compared with 1,314,026 in 1864; or a decrease of 343,214. Many flocks, however, were brought down within the limits of the proclaimed Counties, as may be inferred by the increase therein, namely, from 2,577,616 to 2,808,496, or of 230,880; but, if accounted for in that way, nothing would be allowed for the natural increase of the flocks in those portions of the Province. But it is a subject that will doubtless receive a closer scrutiny than can be looked for in this report; attention, however, must be drawn to the altered circumstances of the Colony as regards the supply of animal food, disclosed in the quarterly returns of imports and exports of live stock overland.

Instead of exporting large numbers of sheep as in several previous years, we had, in 1865, to purchase largely in the neighboring Colonies, and our market has been regularly supplied for some years with fat cattle from the Darling. In 1864 we exported 186,526 sheep more than we imported, but in 1865 the balance was against us by 38,392; and during the first quarter of the present year by 32,837 more. With respect to cattle, the excess of imports has increased from 400, in 1864, to 6,456 head, in 1865; and 770 arrived during the past quarter. Seeing that some time must elapse before this anomalous state of things can be remedied, a favorable opportunity presents itself to agriculturalists for adopting an improved system of farming. Were one-half of the present area under wheat devoted to the growth of less exhaustive crops, with a view to the rearing of fat stock, not only would the soil recover its original fertility: and the community cease to be dependent on its neighbors for a supply of animal food; but the whole body of persons interested, directly or indirectly, in agriculture would, in some degree, be insured against the immense risks attendant upon engaging so extensively in the cultivation of but one description of crop, and that one peculiarly subject to vicissitude, both in its production and subsequent disposal.

I have the honor to be, Sir,

Your obedient humble servant,

J. BOOTHBY,

Government Statist.

TABLE I.—ABSTRACT showing the AREA, the total COUNTRY and SUBURBAN LANDS SOLD, the extent ENCLOSED, CULTIVATED, ENCLOSED but not CULTIVATED, and the NUMBER and DESCRIPTION of LIVE STOCK in each COUNTY and PASTORAL DISTRICT of SOUTH AUSTRALIA, for the Year ending 31st March, 1866.

Districts.	Area in square miles.	Area in Acres.	Purchased Land to 31st December, 1865.	Extent of Land held by Freeholders.	Land enclosed.	Land under cultivation.	Enclosed, but not cultivated.	Live Stock.					
								Horses.	Horned Cattle.	Sheep (including Lambs).	Goats.	Pigs.	Poultry of all kinds.
